Advisor: Professor [Qiaoyu Tan](#)

- Designed an extensible benchmark for assessing GraphLLM's robustness under adversarial attacks and defenses.
- Developed novel prompt attack methods (label shuffling, noise injection), causing a **50%** performance drop; implemented text attacks (HLBB, TextHoaxer) and structure attacks (Nettack, PRBCD), reducing accuracy by up to **60%**; applied adversarial training (FGSM, PGD) and data augmentation to restore up to **30%** robustness.
